

Compressors, Air Tools & Spraying

Air Compressors

The compressors listed here have been carefully selected to form a complete range covering the majority of home, semi-professional and professional users. Whether it be airbrushing, spraying, stapling/nailing, screwdriving, drilling or a host of other applications there is a compressor here to fit the bill. All of our compressors are manufactured to high quality standards and will give excellent performance and reliability. All the receivers are fully tested and conform to all current safety standards. Each unit comes with a full 12 months warranty and all the receivers are individually certificated. The range is backed up by an excellent spares and after sales service.

We are often asked for advice from customers when choosing a compressor. Our two main pieces of advice are firstly, always look at the free air delivered by the compressor, not the piston displacement and, secondly make sure that the output of the compressor exceeds the consumption of the tool or tools. Some manufacturers quote just the piston displacement and this can mislead the unwary into believing they are purchasing a compressor with a larger capability than they are actually getting. Provided that the free air delivery from the compressor exceeds the requirement of the air tool you should not have the problem of running out of air halfway through a job. The alternative, of course, is to buy the biggest compressor at the outset on the basis that you will then have sufficient capacity for larger tools in the future.

£109.96

Ex.vat: £91.63
Code: 501083

Axminster Air AWC10HP Compressor

A small, direct drive, oil lubricated, ducted air cooled, portable compressor. Great in the workshop or around the home for low volume air tools such as air staplers and nailers, air brush painting, occasional tyre inflation etc. Quite a robust little unit with a cast iron cylinder for long life. Twin pressure gauges monitor receiver and output pressures. Supplied with four rubber feet, top grab handle for easy mobility, output pressure control valve and a 1/4" BSP female quick release fitting.

AXMINSTER TOOLS
air

£119.95

Ex.vat: £99.96
Code: 951816

Axminster Air AWC20HP Compressor

The AWC20HP is an economically priced single cylinder oil lubricated unit with a 1.4kW high efficiency motor. The cast iron pump cylinder provides long term durability. Producing 5cfm @ 40 psi and 4cfm @ 90 psi compressed air delivery into a 24 litres air receiver. Fitted with wheels and a grab handle for easy mobility. Receiver and outlet pressure gauges are fitted along with an outlet pressure regulator. It is suitable for a whole range of general workshop uses such as small size nailing and stapling, riveting, greasing, dusting, tyre inflation, airbrushing and touch-up spraying. The only jobs which are beyond its capabilities are the use of the larger continuously running tools such as sanders, large spray guns, drills and polishers, all of which will need a more powerful compressor coupled to a larger capacity tank. The outlet is fitted with a 1/4" BSP female quick release fitting.

Compressor Oil

Specialist compressor oil which meets the demands of all of our compressors. High viscosity, low carbon forming, anti-corrosion agent and conforms to all latest DIN specifications. Supplied in a one litre bottle. **Owners of Bambi oil lubricated compressors are advised to consider the Bambi Synthetic Oil 951512**

	Inc.vat	Ex.vat	Code
Compressor Oil 1 litre	£7.45	£6.21	200610

Bambi Synthetic Oil

Synthetic compressor oil for all Bambi oil lubricated compressors. Greatly enhances the lubrication protection levels of these compressors, ensuring long service life and minimal oil consumption.

	Inc.vat	Ex.vat	Code
Synthetic Compressor oil 1 litre	£36.96	£30.80	951512

Filters & Regulators

A range of industrially-rated air control units for lubricating, filtering and controlling the air supply from the compressor to the air tool. They all have mounting brackets supplied and the filter units have a spring loaded drain vent at the bottom. N.B. All the units have 3/8" BSP female tappings. Suitable adaptors can be found under Threaded Airline Fittings.

	Inc.vat	Ex.vat	Code
Filter/Reg c/w Gauge	£48.96	£40.80	800405
Air Filter	£29.46	£24.55	800404

In Line Disposable Air Filters

These in-line filters, with their centrifugal action and built in filter, will make all the difference to a sprayed finish. Used in conjunction with a tank mounted air filter they should give up to 10 days of trouble free spraying. 1/4" BSP female fitting at one end, 1/4" BSP male at the other. Please note that the filters are sold in pairs.

	Inc.vat	Ex.vat	Code
In-line Filters (2)	£4.96	£4.13	010033

Axminster Air AWC30HP Compressor

A compact yet powerful unit, the AWC30HP, features a twin cast iron cylinder oil lubricated and ducted air cooled pump, which is directly driven by a 2.2kW motor. The 50 litre tank is very quickly re-charged and has a variable output pressure regulating valve and gauges for monitoring output pressure and tank pressure. Very portable as it is supplied with two decent wheels and a convenient grab handle. Able to drive all air tools except the highest air demanding sanders and spray guns, this is an excellent medium sized machine for most home workshops, arts and crafts, cabinet making and general woodworking. Supplied with a 1/4" BSP female quick release fitting.

£239.95

Ex.vat: £199.96
Code: 501274

Axminster Air AWBD3050 Compressor

A traditional belt drive workshop compressor, built for hard work over long periods. Quiet running and easy to move around, this machine will suit many workshop applications. Its 50 litres receiver is ideal for continuous nailing, stapling, running small sanders, small batch spraying and many other tasks. With oil lubricated cast iron cylinders for long pump life, this machine will give many years of good service. It is equipped with a receiver pressure gauge, output pressure gauge and out regulator valve. Includes a 1/4" female quick release fitting.

£389.95

Ex.vat: £324.96
Code: 340648

Bambi BB24V Compressor

With noise levels around 40dB(A) and almost no vibration the Bambi BB24V can be located anywhere in the workshop without causing any intrusion. The vertical design takes up very little space whilst the 24 litre receiver is charged to 8 bar ensuring plenty of air is available for nailing, stapling, airbrushing and operating pneumatic systems.

Standard features: Internally coated air receiver, Clearview oil level check, Easy to use oil filler plug and 10 micron outlet filter and adjustable pressure regulator. A 3 year receiver warranty ensures peace of mind.

A favourite for educational work, exhibitions stands and front of shop use, indeed anywhere compressed air is required, silently.

Axminster Air AWBD30100 Compressor

Sharing the same motor and pump unit from the AWBD3050 compressor, this model has a 100 litre receiver tank to give twice as much stored air capacity. This allows some demanding tasks that need a greater volume of high pressure air to be carried out. The same facilities as found on the AWBD3050 model are also found here. i.e. receiver and output pressure gauges, adjustable output pressure, decent sized pneumatic tyres and a grab handle. Whilst not as compact as the 50 litre version, the extra capacity can be very handy at times.

Air Hoses

The best way to connect up your compressed air system is to use bayonet quick release airline fittings at both the compressor and tool ends of the air hose; the fittings are easy and safe to use and allow for quick interchange of tools and hoses. The diagram below shows the recommended layout of the system - please note that the spring loaded quick release fittings should be fitted to the compressor and to the tool end of the hose so that the air is contained when either the hose or the tool are disconnected.

The swivelling fittings, 410251 male and 410250 female, are highly recommended for fitting to the air tool, as they give greater flexibility in operating the tool as well as preventing snags and twisted airlines.

Key to Fittings:

A - 100311 Female Thread Quick Release.

B - 100314 Female Thread Bayonet (or 410250 swivelling)

C - 100313 Male Thread Bayonet (or 410251 swivelling)

Nylon Coiled Air Line

Coiled 1/4" bore nylon hose in a choice of 7.5m(25') or 15m(50') lengths. Each comes complete fitted with a female quick release fitting at one end for coupling to an air tool and a male bayonet for direct connection to a compressor at the other.

	Inc.vat	Ex.vat	Code
Coiled Air Line 7.5m	£6.25	£5.21	200149
Coiled Air Line 15m	£7.26	£6.05	200150

Airline Reel

- 20 metres of high pressure airline stored on a hose reel
- Fibre reinforcement gives 12 bar working pressure
- Separate hose with rotary seal for connection to compressor
- Much longer life than loose airline hose
- Supplied with Quick Release bayonet fittings
- Top quality, made in Germany

	Inc.vat	Ex.vat	Code
Airline Reel 20m	£49.96	£41.63	110163

Self-Retracting Air Hose

- Self-retracting for neat and efficient working
- 7.5m of 8mm OD hose
- Fitted with 1/4" BSP ends
- Max working pressure 200psi

	Inc.vat	Ex.vat	Code
Air Hose 7.5m	£38.46	£32.05	310372

8mm Bore Air Hose

8mm bore nitrile hose with crimped-on 1/4" BSP male fittings on both ends in a choice of two lengths.

	Inc.vat	Ex.vat	Code
Air Hose 8mm x 7.5m	£24.96	£20.80	100349

Air Tool Starter Kit

An economical package of spray gun and air accessories for general purpose use around the workshop. Kit comprises spray gun, tyre inflating gun with pressure gauge, air duster, degreasing gun, hose and PCL quick release fittings. For all compressors listed with a 2hp motor or bigger. (Fitting 1/4" BSP male).

£23.95

Ex.vat: £19.96
Code: 200228

Axminster SG215 Mini Touch Up Gun

A handy little spray gun, useful for spraying small areas of work or modelling projects. Can handle almost all finishes including water based acrylic enamels. Easy to use and comfortable, especially in the smaller hand. Fitted with a stainless steel paint flow needle, air fan control, paint regulator and 125ml suction feed cup. 1/4" BSP male inlet fitting. Takes quick release bayonet fitting 100314 or 410250 (swivelling).

£25.96

Code: 100211

£30.96

Ex.vat: £25.80
Code: 340291

Axminster AS1020 Low Pressure Spray Gun

An inexpensive, low pressure spray gun with an 800cl capacity cup and 0.7mm nozzle; for basic spraying use with any small compressor with a 1hp rating or above. Uses a maximum air delivery of 1 - 3cfm, free air delivered at 10 - 40psi. The constant air bleed through the gun cannot be switched off, other than by disconnection from the compressor.

£59.95

Ex.vat: £49.96
Code: 100308

Axminster AS1040 Spray Gun

A good general purpose spray gun, well balanced and with finely adjustable fluid and air controls. Locking cup and safety lever make this gun a good choice for a quality finish. 1/4" BSP male inlet fittings. For quick release bayonet fitting use 100314 or 410250 (swivelling).

Axminster Spray Gun Cleaning Kit

Keep your spray gun in tip-top condition. The cleaning kit comes in a neat plastic case and comprises the following: 6 piece precision needle kit for gun nozzles, a handle for the needles, a 3 piece precision end bush set and a handle to suit. Numerous brushes include a nylon stiff bristle parts brush, 5 piece mini spiral brush set, a brass spiral brush, 6mm and 12mm nylon spiral brushes and a long handle spiral brush. Also in the case is a precision oiler.

Bulk Spray Guns

£104.95

Ex.vat: £87.46
Code: 340292

Axminster AS1070 2 Litre Spray Gun

A handy sized bulk spraying unit with a 2 litre tank and a high quality spray gun, a real boon to those who have a need to spray large areas with paint, stains, varnishes and other materials. Air is fed from the compressor to the pressure controller and then on to the spray gun to atomise the paint which is in turn fed to the gun through a second hose connected to the top of the paint pot. The pressure gauge fitted to the controller gives a good degree of control over the spray pattern. The hose length is 1.8m(6').

Important Note: This spray system is not suitable for use with Xylene or Cellulose paints. If, however, there is a possibility of using these types of paint an additional delivery hose should be purchased.

	Inc.vat	Ex.vat	Code
Delivery Hose 8mm x 4m	£69.95	£58.29	292000

£199.96

Ex.vat: £166.63

Axminster AS1080 10 Litre Spray Gun

This bulk spraying kit with its 10.2 litre capacity pressurised paint pot and high performance spray gun is a real boon for those who have a need to spray large areas with paint, stains, varnishes and other materials. Air is fed to the pressure controller from the compressor (minimum airflow 10 cfm) and then on to the spray gun to atomise the paint which is in turn fed to the gun through a second hose connected to the top of the paint pot. The pressure gauge fitted to the controller gives a good degree of control over the spray pattern. The length of the two hoses is 3.7m(12').

Important Note: This spray system is not suitable as delivered for use with Xylene or Cellulose paints. If, however, there is a possibility of using these types of paint an additional delivery hose should be purchased. 1/4" BSP male fitting.

Professional Spray Equipment

If you are considering setting up a spraying system in your workshop a High Volume Low Pressure (HVLP) has to be the way to go. Completely portable, they take up next to no space and need very little setting up compared to a compressor driven system. Also, the cost layout is relatively low to achieve professional results, with much less time being spent between jobs. We have sold the FUJI HVLP spray systems for many years; they are consistently rated as the very best systems around thanks to continuous development in turbine and spray gun technology.

There are 4 FUJI Turbines to choose from, but don't worry, it's not a complex choice. The range has two designs in two turbine types. The Mini-Mite range is the basic version whilst the Q Gold models have the patented Fuji noise reduction system, reducing noise by 50%, down to an almost conversational level. The numbers 3 or 4 refer to the number of turbine fans, four fans giving a higher pressure (9psi versus 6.5psi) to cope with higher viscosity finishes such as latex house paints or larger jobs that need a faster application of the finish, re-spraying a car for example. For normal water or oil based finishes to be applied to furniture, cabinets or for small vehicle panel refinishing the three turbine models will be more than adequate. All models feature an internal air dump valve to allow the non-bleed spray gun feature, twin air filters, a sturdy top grab handle and high quality alloy and brass air fittings. A 7.6 meter hose is supplied, with quick-connect fittings and an air volume control valve. The bottom line is, you can expect a consistent and impressive performance from any model of FUJI HVLP spray system, we don't think you can really ask for more.

3

Fuji Mini-Mite 3 or 4 Turbine Unit with T70 Spray Gun

- Three stage turbine power unit
- Most finishes can be sprayed
- 25' (7.6m) 3/4" hose supplied
- Supplied with Fuji's comprehensive guide
- Choice of Xpc spray guns with Adjustable Spray Pattern control
- 1.4mm aircap as standard, covers the majority of applications
- Other aircaps available for special applications

Fuji T70 Spray Guns

The Fuji T-Series Spray Gun features an exclusive side-mounted pattern control knob to adjust the size of the fan. This knob allows you to switch from a small to large pattern, or anywhere in between. Unlike HVLP turbine spray guns with the front collar adjustment, the pattern control knob offers full incremental fan size throughout the whole range. The fan pattern is adjustable from 1" to 15" from a distance of 8". Smaller than 1" is achieved by moving closer to the object to be sprayed. All T-Series Spray Guns are installed with a 1.3mm needle and nozzle set-up. You can obtain a professional finish with all known coatings. The gun body is CNC machined to aircraft tolerances. All Fuji spray guns are non-bleed. Air passes through the spray gun only when the trigger is pulled. The light weight of the T-Series and easy-pull trigger means less fatigue for the operator. Features include:

- Centre mounted 600cc gravity cup or 950cc bottom feed cup versions available
- A stay-cool nylon handle (fitted over a metal tube)
- Stainless steel fluid passages and an external needle packing adjustment
- Metal fluid knob and collar, stainless steel internal components
- Rear rotating nipple for pressure tubes makes for easier adjustment especially for those who are left-handed

Code: 501285

To meet the growing demands of the home, hobby and craft markets, Fuji has introduced the Semi-Pro2 HVLP spray system. Key features found on no other entry level system are standard, such as a powerful 1,400W 2-stage motor turbine and the Fuji M-Model spray gun. This is a non-bleed design of gun with a fan control knob to adjust the spray pattern from small circular to a wide fan (and all increments in-between). Light in weight with a cool handle, this is supplied as a suction gun with a 1,000cc cup, but a smaller 400cc gravity cup kit can be purchased as an option. The nozzle and needle are stainless steel; other air caps are available as optional extras. The turbine unit is in a sturdy steel cabinet complete with a grab handle and handy gun storage. External air filters are easy to wash or change. Includes a full 7.6m hose with Quick Connect Coupler and an Air Control Valve. This is a lightweight machine ideally suited to serious DIY, crafts or hobbies. Supplied with comprehensive user manual, viscosity cup, cleaning brush and wrench. Everything except the paint!

Fuji Xpc Air Caps

Finest 0.7mm (.027"), (0.8mm 0.031" M model) size Aircap Set for finest atomization. Suitable for inks, shading, mist coats and spray tanning.

Fine 1mm (.039") size Aircap Set for finer atomization. Suitable for most water-based lacquers and shading.

Standard 1.4mm (.055") (1.3mm .055" M-Model) is installed in all Xpc spray guns. Aircap Set is perfect for most fine finishing.

Medium output 1.5mm (.60") Aircap Set for slightly heavier coats with standard paints.

High output 1.8mm (.070") Aircap Set for faster coverage of large areas with any type of paint.

Extra High output 2.2mm (.086"), (2.0mm, 0.78" m model). Great for spraying large surfaces such as walls with emulsions. Expect some slight texture.

Needles 211963-211967 are for Xpc guns only, needles 501286-501291 are for M-Model guns only.

Fuji T70 Series Gravity Cups

Optional or replacement gravity feed cups for T70 Series spray guns. Choice of 600 or 950cc sizes.

Axminster Air CP103 Air Brush Compressor with Reservoir Tank

A small 1.5cfm oil-less diaphragm compressor driven by a 90W induction motor. Quiet and exceptionally portable, the CP103 is suitable for use with most small air brushes and air brush kits. Supplied complete with a 3.5 litre air reservoir tank, this gives a much smoother flow of air to the brush so that a better finish can be achieved. Complete with a 1/8" BSP outlet and 1/8" BSP to 5mm adaptor and moulded 13A plug.

N.B. This compressor is only suitable for use with air brushes.

Apollo Pro-Spray 1500-3s

A British made High Volume Low Pressure unit designed for the serious sprayer, this model has a powerful 1,500 watt 3 stage turbine and the ability to handle all types of coatings. The turbine housing is all steel and powder coated to withstand the everyday knocks and scuffs on-site or in the workshop. The 6 metre air hose with brass couplings is rugged enough for everyday use. The externally mounted air filter is easy to check and change when required. Included with this machine is the professional ANB300 Proline aluminium spray gun with several key features. This is a "non bleed" gun, meaning that the air shuts off when the trigger is released, reducing dust lift. A stainless steel needle set (1.3mm is supplied as standard), essential with the new generation of water-borne coatings. Smooth trigger action for accurate application control. Ergonomic, stay-cool handle unit for all day comfort. Adjustable fan pattern from horizontal to vertical plus an additional spot controller for super fine detail work. This powerful spray unit has been designed with the professional sprayer, looking for the highest possible finish whatever the application.

Axminster Professional Tyre Inflator

This is a rugged tyre inflator with a dial reading pressure gauge, more like the one you find at the local garage (or maybe even better!). With a large, clear gauge protected by a rubber housing, it reads in psi, kg/cm², kpa and bar. Cleverly, the gauge swivels to allow left or right handed use. It has a 1/4" BSP female fitting. For quick release couplings use 100313 or 410251 (swivelling).

	Inc.vat	Ex.vat	Code
Professional Tyre Inflator	£58.96	£49.13	505212

Axminster R15 Air Riveter Kit

A production rivet gun kit with four different rivet heads for blind rivets 3mm, 4mm and 5mm. The rivet is easily set with a pull on the trigger and without the risk of damaged knuckles. On the rear of the gun is a receiver which catches rivet shanks and stores them ready for later disposal. Supplied in a kit box with an impressive collection of rivets, jaws, noses, spare parts and tools. This gun will work on virtually any compressor with a reservoir tank. 1/4" BSP female fitting.

	Inc.vat	Ex.vat	Code

Axminster B41 Air Caulk-Mastic Gun

If you have ever dispensed more than half a tube of mastic around windows or frames you will appreciate the simplicity and convenience of this very simple gun. At the touch of the trigger air pressure is applied to the back of the cartridge and out comes a very even flow of material. Be warned, however, that if the pressure is too high it tends to come out rather quickly! Suitable for use with virtually any small compressor fitted with a reservoir. Saves a lot of arm ache! The tool is supplied with a 1/4" BSP bayonet connector. Please refer to the Airline Fittings section for details of suitable airlines and fittings.

Air Dusters

Axminster Heavy Duty Air Duster

A nicely made cast alloy air duster. Chrome plated body with brass valve and nozzle to ensure a long life. Convenient hanging hook. Comfortable and durable in use. Has a 1/4" BSP female fitting. For quick release coupling use 100313 or 410251 (swivelling).

	Inc.vat	Ex.vat	Code
Air Duster	£14.95	£12.46	310374

Air Tool Sanders

MIRKA

Mirka ROS325CV

Mirka ROS325DB

Mirka ROS325CV/ROS325DB 77mm Random Orbit Sander

The Mirka ROS325CV (Central Vacuum) and ROS325DB (Dust Bag) pneumatic random orbit sanders are fitted with a 77mm backing pad that has been specially developed for spot sanding of defects or sanding small furniture pieces. The ROS325CV model is fitted with Mirka's central vacuum port, so that when the sander is connected to a suitable dust extraction system you are able to sand completely dust free. The ROS325DB model has a dust bag for those who do not have a vacuum extraction system; only compressed air is required for dust free sanding.

These sanders fit neatly in the hand and are extremely light and balanced so can be used for long periods without the user tiring. The speed is exceptionally easy to control. A 2.5mm orbit guarantees a fine surface finish. If you are looking for sanding perfection in a smaller package then these sanders are for you. Full range of abrasives available, see Abrasives, Cleaners and Finishes section.

	Inc.vat	Ex.vat	Code
ROS325CV 77mm Central Vacuum	£149.95	£124.96	501125
ROS325DB 77mm Dust Bag	£149.95	£124.96	501126

MIRKA

Mirka ROS650CV

Mirka ROS650DB

Mirka ROS650CV/ROS650DB 150mm Random Orbit Sander

The Mirka ROS650CV (Central Vacuum) and Mirka ROS650DB (Dust Bag) are 150mm air powered random orbital sanders with a 5.0mm orbit. This style of sander has a huge reputation for fine finishing and Mirka products take the lead in this field. The ROS650CV is fitted with a central vacuum port which ensures completely dust free sanding when it's connected to a suitable extraction system. The ROS650DB is fitted with a dust bag system which ensures completely dust free sanding without requiring connection to an extraction system.

These sanders are extremely light in weight, very well balanced and can be used for long periods. The speed can be regulated through a range of 4-12,000rpm. Suitable for use on all kinds of surfaces and capable of a very fine finish. Perfect for large furniture, work surfaces and vehicle use. Full range of abrasives available, see Abrasives, Cleaners and Finishes section.

Axminster Air DA1564 15 Gauge Finish Nailer

An industrial finishing nailer for both interior and exterior use. The non-marking tip device and the adjustable depth control make it just as good for fine furniture and upholstery work as it is for battening and framing. Easy loading of nails into the rear entry angled magazine coupled with the powerful nailing action make this a real time saver on site. The swivelling exhaust deflector and rubber grip handle makes for comfortable use. The nails are 34°, 15 gauge (1.8mm) with 3mm heads. The nailer will take nails with a minimum length of 15mm and a max of 50mm. The tool has a 1/4" male bayonet fitting. Lubricate regularly. Please refer to Airline Fittings section for details of suitable airlines and fittings. For quick release bayonet fitting use 100313 or 410251 (swivelling). Supplied in a plastic storage case.

Axminster Air FN2890D Framing Nailer

This is a heavy duty on-site-use nailer, just the job for trusses, decking, framing and sheeting. Exceptionally light and strong due to its magnesium alloy casing. The FN2890D Framing Nailer fires collated 28° clipped head nails from 50mm to 90mm with a diameter from 2.9mm minimum, to 3.3mm maximum. The nailer has a fast loading magazine with load sight and maximum capacity of 84 nails (2 strips). Its handle has a rubberised grip for user comfort, especially useful for shock absorbing and a variable position air exhaust vent. Supplied with 2 triggers to allow single action firing only (to prevent a double firing) or the faster bump feed firing action. Also comes supplied in a sturdy case with safety goggles, service tools and lubrication oil. Please note that this nail gun requires a compressor capable of delivering 7cfm minimum. The tool has a 1/4" BSP female inlet; refer to the Airline Fittings section for details of suitable airlines and fittings.

Workshop Air Nailers

With the increasing popularity of low cost portable. Compressors has come a big increase in the use of air powered nailers and staplers in the upholstery, craftwork, furniture making and building trades. They are relatively cheap to buy, convenient to use, very productive and, provided that sensible precautions are taken, long lasting and safe to use. Here are a few safety and maintenance points to watch:

Tools should be lubricated regularly and care taken to ensure that the air pressure is correct and adjusted to suit the size of nail or staple. Excessive pressure will cause unnecessary strain on the firing pin. The firing pin should be regarded as a consumable part and a spare kept to hand. Nail guns use the spent air at the end of the stroke to return the piston or firing pin to the upper position and therefore, if the gun has been used on a discharged compressor, the piston may remain in the downward position. If this should occur, and it sometimes is unavoidable, especially when the unit is new and is not worn in, the gun should be removed from the supply and the firing pin returned manually to its normal resting position. If the firing pin should break after a jam, a new firing pin should be installed immediately to avoid any further damage. If you have problems operating one of our nail guns please contact our Specialist Sales Department who will be pleased to help. Always check for a broken firing pin before sending back for repair under warranty as this can easily be replaced without incurring postage or service charges.

Axminster Air AWHP Headless Pinner

- Drives 24 gauge headless pins up to 20mm long
- Fast fixing of mouldings, decorative trim, glazing bead, etc
